## DETAILED ACTION

### *Response to Arguments*

1. Applicant's arguments with respect to claims 1-3 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Yi et al., (USPAT 6,670,649 B2) Yi in view of Grima-Gallardo et al., ("A Comparative Study of  $(\text{Cu-III-Se}_2)_x(\text{FeSe})_{1-x}$  Alloys (III: Al, Ga, In) ( $0 \leq x \leq 1$ ) by X-Ray Diffraction, Differential Thermal Analysis and Scanning Electron Microscopy" Phys. Stat Sol. 187, No 2, 395-406, Wiley 2001) Grima-Gallardo.
3. Yi discloses forming a p-type electrode using a combination of elements selected from Group 1B, Group 8 and S or Se. (Column 4, lines 54-59 and Column 5, lines 30-35).
4. Yi does not specifically disclose mole ratios of the elements combined. Grima-Gallardo discloses various alloys of this class, which include at least Fe from Group 8.
5. Yi as modified by Grima-Gallardo discloses the claimed invention except for the specific mole ratios cited in claim 1. It would have been obvious to one having ordinary

skill in the art at the time the invention was made to determine the optimum mole ratios through routine experimentation, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. In re Boesch, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

***Allowable Subject Matter***

6. Claims 2-11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

7. The following is a statement of reasons for the indication of allowable subject matter: the prior art of record, taken alone or in combination, fails to disclose or render obvious forming a p-type electrode from a chalcopyrite compound containing Cu, Fe and S or Se in contact with a Group II-VI compound semiconductor nor the use of a stepwise decrease in components of the electrode of this compound used with a light-emitting element.
